Hot chilli varieties

Chilli seeds - extra hot chilli varieties.

More about chilli peppers

The naturally occurring chemicals that give Chilli peppers their intensity are capsaicin (8-methyl-N-vanillyl-6-nonenamide) and several related chemicals, collectively known as capsaicinoids. Capsaicin is the primary ingredient in pepper spray. The strength of Chilli peppers is measured in Scoville units (SHU). Bell peppers rank at 0 (SHU), jalapeños at 3,000–6,000 SHU, and habaneros at 300,000 SHU. The record for the hottest Chilli pepper goes to Naga Jolokia, measuring 1,000,000+ SHU. Pure capsaicin, which is a hydrophobic, colourless, odourless, solid at room temperature, measures 16,000,000 SHU.

Chilli seeds (Adorno)

£2.64
